Submission ID: 1632122487

### Introduction

The C programming language is one of the most frequently used languages. Official and machine-independent programming languages are also widely used in applications. The C programming language was used to create everything in the operating system, from complex programs. This program builds a console for health insurance and health insurance management systems. We offer a variety of choices depending on the age of our customers, but there are restrictions on the elderly. The most important feature of the console is that people can check in insurance, payment process account information and search function. Create this terminal using programming features such as struct pointer variables, functions, etc.

This approach saves paper by retaining information about the software on the device. On the one hand, it helps recover some important data that is missing. The quick steps in this system involve tracking subscribers and displaying the total lifetime subscriber bill and annual subscriber bill. This method helps the subscriber determine the desired quote type.

#### Assumptions:

First Reader will fill out a paper form with all the information and submit it to the counter. After that, the paper is more likely to be lost. It took a long time to complete the task. Finally, it takes time to report the supporter.
